US-CL-CURRENT: 428/91, 428/904 , 442/108 , 442/FOR.166

ABSTRACT:

PURPOSE: In cloth of suede tone, the titled cloth not leaching pigment during preparation and in use, having improved light resistance, having a main napped part comprising extremely thin yarn consisting of a core which is spun-dyed, and a sheath which is not spun-dyed or spun-dyed in a lighter way.

CONSTITUTION: In yarn of core sheath type structure to form extremely thin yarn having $<0.7d$, preferably $\leq 0.3d$, a main napped part of cloth of suede tone comprises extremely thin spun-dyed yarn of core sheath type consisting of

sol'n dyed (doped) + sheath/core
~~at 2.7d~~ Core-dyed
Sheath - non-dyed
COUNTRY

• Sheath protects fiber from fading, bleeding of dye

a core which is spun-dyed with inorganic pigment and a sheath which is not spun-dyed or spun-dyed in a lighter way than the core, to give colored cloth of suede tone not fading by dry cleaning or by washing. The pigment in the core component is protected with a covering component, fading in drawing process and in crimping process or extraction and dispersion of the pigment caused by an after-treatment solvent are prevented or reduced, and decrease in strength and change in surface friction properties caused by pigment blending are prevented.
